## **Triple Offset Butterfly Valve**

The Flowserve TX3 triple offset butterfly valve offers excellent shutoff capabilities, with the low torque and reduced wear benefits of a triple offset design. The laminated disc seal, in conjunction with the triple offset geometry, results in a design that can provide bidirectional, bubble-tight shutoff.

## **Product Specifications**

The Flowserve TX3 triple offset butterfly valve meets a number of industry standards for performance:

**Table 1 – Product Specifications**

Design Standards	ASME B16.34, API 609 (Category B), PED
Sizes	3 to 24 NPS
Pressure Classes	ANSI Class 150, 300, 600, 900, 1500
End Connections	Lugged, Wafer, Double Flanged (long and short), Butt-weld (cryogenic)
Face-to-Face	API 609 (lug and wafer), API 609 and B16.10 (long pattern), API 609 and ISO 5752 (short pattern)
Operating Temperature	Standard -58°F (-50°C) to 800°F (427°C), High Temperature to 1500°F (820°C), Cryogenic to -320°F (-196°C)
Leakage Rates	API 598 and ISO 5208 Rate A (laminated seat); Rate CC (metal seat)
Fire Safety	API 607, ISO 10497
Fugitive Emissions	ISO 15848 Tightness Class BH, Endurance Class C01 (low emissions packing)
Country Approvals	PED (EU), TRCU (Russia), CRN (Canada)

## **About Triple Offset Valve Technology**

Flowserve triple offset metal seated valves feature a special sealing mechanism, comprised of contacts of an inclined and conical body seat with laminated seal ring. As a result, the friction and abrasion between the sealing elements (i.e., seal ring and body seat) are eliminated. The unique feature of this design is that it provides low torque, broad sealing and tight shutoff.

### **Single Offset**

The rotation axis of the disc is moved back from the sealing surfaces of the body seat. The purpose of this offset is to have a continuous sealing surface on the seal ring and body seat.

### **Double Offset**

The rotation axis of the disc is moved away from the center line of the valve body. The purpose of this offset is to lift the disc and seal ring quickly off and away from the body seat while decreasing the friction during operation.

### **Triple Offset**

The virtual conic axis, extended from the sealing surfaces of the body seat, is inclined from the rotation axis of the disc. The purpose of this offset is to eliminate friction, galling and wear generated at the sealing surface during operation and provide bubble-tight shutoff on high pressure and temperature.

## Features and Benefits

- Triple offset design — eliminates wear associated with sealing surface contact and maintains sealing integrity during high cycle
- Laminated graphite or metal-to-metal sealing provides robust performance in a wide range of harsh and difficult services
- Robust, anti-blowout shaft meets requirements of API 609
- Bi-directional, tight shut-off
- Low-operating torque for compact, cost-effective actuation
- Meets industry standards for design, fire safety and fugitive emissions

## Sealing System

### Principle of Sealing System

TX3 triple offset valves operate using a camming action which reduces the possibility of galling or scratching on the sealing surfaces between the sealing elements (i.e., disc and seat). It also reduces the possibility of jamming between the sealing elements, which can happen with valves that rely on single-point sealing.

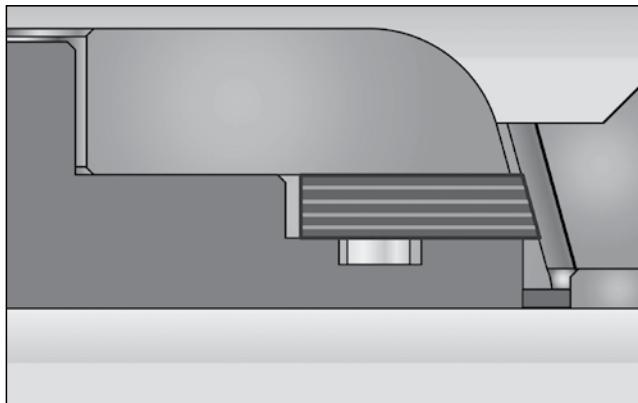

The sealing surfaces of the Flowserve valve disc have different angles in all points. The Flowserve TX3 valve has an elliptical sealing system. The sealing surfaces of an elliptical sealing system are completely in contact at the final position only, and upon opening, all contact points are released immediately from the seat ring. This mechanism provides flawless bubble-tight shutoff. Therefore, the seat ring is not directly influenced by fluid in open positions.

The TX3 triple offset butterfly valve is a torque-seated valve, utilizing the torque provided by the operator to create a seal, rather than by positioning of the disc. This provides a robust, positive means for shut-off, particularly for high-pressure and/or high-temperature applications.

## Laminated Seal Ring

The laminated seal ring is composed of alternating layers of metal and graphite. The laminated seal ring of a TX3 valve provides bubble-tight shutoff, even in gas applications. Each individual layer performs an independent sealing and is unaffected by the damages to other layers. The elements of the laminated metal plate can be offered with various metals, including 316SS, Duplex, Inconel, Monel and Hastelloy®, depending on the application.

Additionally, for high-temperature and more severe applications, a solid metal seal ring is available. The solid metal seal ring is also used for cryogenic applications.

## Packing and Bearings

The TX3 butterfly valve uses proven packing designs to provide trouble-free stem seal performance for a variety of applications. Material options include PTFE for optimum leakage control, while graphite provides fire-safe protection. Options include single and double packing sets, purge ports and spring loading for high-cycle or high-temperature swing services.

Robust bearing design provides solid shaft support to maximize service life and control valve performance. Materials are offered to provide corrosion resistance in a variety of harsh chemical services.

## End Connections, Flanges and Bolting

The TX3 butterfly control valve is offered in several standard end connections to meet a variety of industry standards and customer applications. Lug, wafer and double-flanged styles are offered as standard. Face to face dimensions for all styles will meet the API 609 standard.

**Table 2 – Bearings**

Bearing Material	Recommended Shaft Materials
316 SS Nitrided	410SS, Nitronic 50, 17-4 PH, Monel, Inconel
Stellite, 316 Stellite	410SS, Nitronic 50, Inconel, Monel

*The standard 316SS bearing with Nitride treatment is compatible with all shaft materials and will work acceptably in most applications. For special applications where a customer's application or specifications demand a more durable bearing, a solid stellite or stellite overlayed 316SS bearing is available.*

*Note: Valves with shaft diameters 1.5" or smaller must use a solid stellite bearing; overlay is not possible on these sizes of bearings.*

**Table 3 – Packing Options**

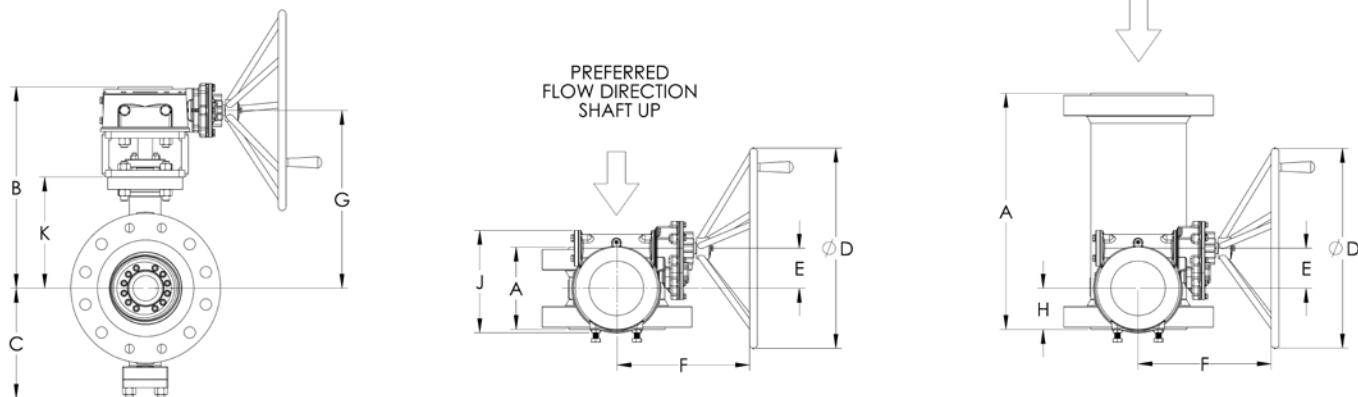

Packing System	Packing Description	Max. Pressure		Max. Temp		Options Availability	Certification Approvals
		psi	bar	F	C		
Standard PTFE V-Ring	Virgin PTFE V-rings	4000	276	-148 to 400	-100 to 204	Single/Twin/Live Loading	-
	Filled PTFE V-rings	4500	310	-148 to 500	-100 to 260	Single/Twin/Live Loading	-
Graphite Rib-Braided	Combination of braided carbon rings and die-formed graphite square rings	4400	300	-320 to 1200	-196 to 650	Single/Twin/Live Loading	API 607
Safeguard (Live Loaded)	Combination of virgin and carbon-filled PTFE V-rings	3000	207	-60 to 450	-51 to 230	Single/Twin	-
Sureguard	Combination of perfluoroelastomer and filled PTFE V-ring	2000	138	-20 to 450	-29 to 230	Single/Twin/Live Loading	-
Sureguard XT	Combination of perfluoroelastomer and Vespel® V-rings	4000	276	-20 to 450	-29 to 230	Single/Twin/Live Loading	-

*Note: Cryogenic stem extension required for temperatures below -60°F / -51°C.*

*Higher temperature limits can be achieved with stem extensions. Consult factory for details.*

*Graphite Rib packing is limited to 842°F (450°C) in oxidizing service.*

## Flanged and Double Flanged Dimensions — U.S.

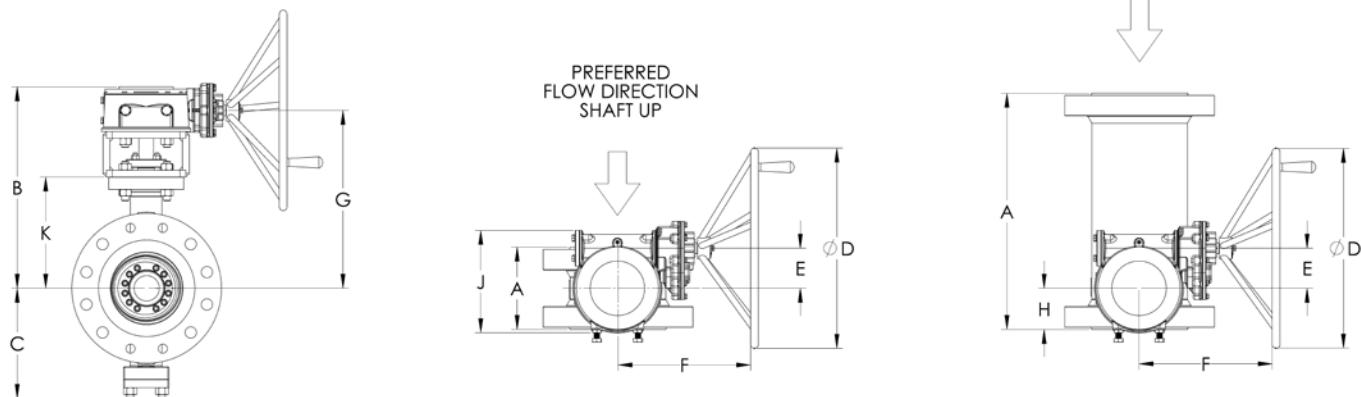

**Notes:** Flange dimensions per B16.5. Some sizes have tapped holes around the shaft area (top and bottom); consult factory for actual dimensions.  
Consult factory for Class 900 and Class 1500 dimensions.

## Lug and Wafer Dimensions — Metric

**Notes:** Flange dimensions per B16.5. Some sizes have tapped holes around the shaft area (top and bottom); consult factory for actual dimensions. Consult factory for Class 900 and Class 1500 dimensions.

Table values represent maximum torque required to provide shut-off. Additional information may be required for detailed actuator sizing. Torque values are provided for the Shaft Upstream (preferred flow direction) configuration. Values are provided with no factor of safety. Flowserve reserves the right to change the contents without prior notice.

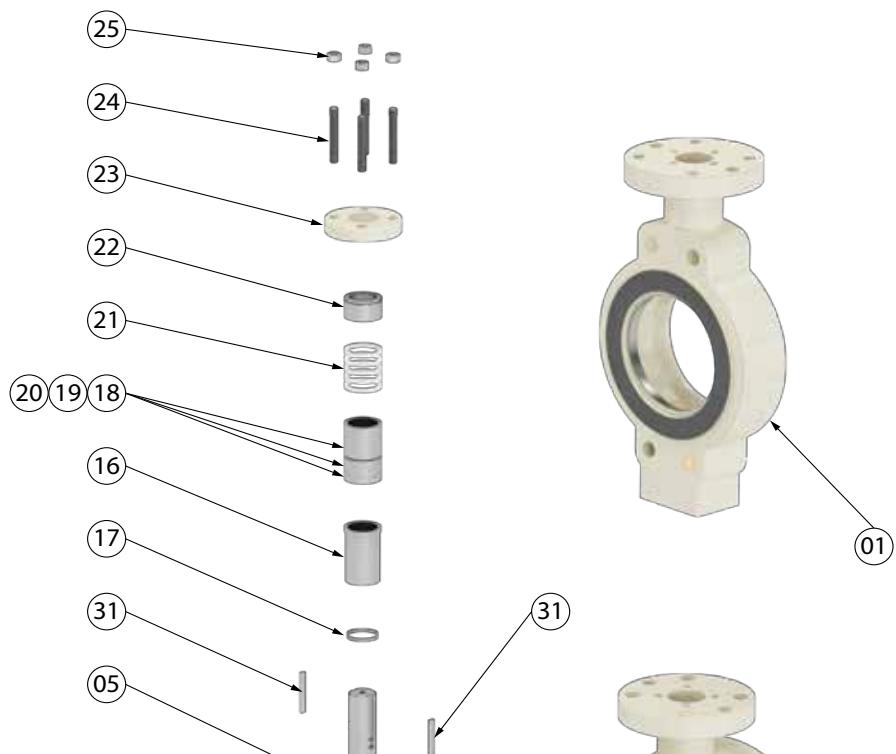

Consult factory for the following:

- Sizing and selection software (PerformanceNXT! or AutoSize)
- Specific actuator sizing guidelines
- Maximum allowable stem torques

***To find your local Flowserv representative***

or for more information about Flowserv Corporation, visit  
[www.flowserv.com](http://www.flowserv.com).

Flowserv Corporation has established industry leadership in the design and manufacture of its products. When properly selected, this Flowserv product is designed to perform its intended function safely during its useful life. However, the purchaser or user of Flowserv products should be aware that Flowserv products might be used in numerous applications under a wide variety of industrial service conditions. Although Flowserv can (and often does) provide general guidelines, it cannot provide specific data and warnings for all possible applications. The purchaser/user must therefore assume the ultimate responsibility for the proper sizing and selection, installation, operation, and maintenance of Flowserv products. The purchaser/user should read and understand the Installation Operation Maintenance (IOM) instructions included with the product, and train its employees and contractors in the safe use of Flowserv products in connection with the specific application.

While the information and specifications contained in this literature are believed to be accurate, they are supplied for informative purposes only and should not be considered certified or as a guarantee of satisfactory results by reliance thereon. Nothing contained herein is to be construed as a warranty or guarantee, express or implied, regarding any matter with respect to this product. Because Flowserv is continually improving and upgrading its product design, the specifications, dimensions and information contained herein are subject to change without notice. Should any question arise concerning these provisions, the purchaser/user should contact Flowserv Corporation at any one of its worldwide operations or offices.
