Australia and New Zealand Manufacturing Facility and Quick Response Centers

Manufacture • Package • Test
Maintenance and Repair • On-Site Services
Parts and Components • Pump Retrofits and Upgrades

Experience In Motion
TKL™ Pumps, a product brand of distinction from the Flowserve pump portfolio, combines the world-leading technology of Flowserve with Australian manufacturing and servicing capabilities. The complete range of well-known Flowserve pumps worldwide can be reached by local customers and are supported by our Spare-part Group, Technical Service specialists and Quick Response Centers (QRC) throughout Australia and New Zealand.

Manufacturing Capabilities in Castlemaine

The Flowserve Castlemaine manufacturing facility, located in Castlemaine, Victoria, Australia, has a long and outstanding history of manufacturing TKL™ Pumps, and it also packages pumps manufactured in Flowserve facilities worldwide. The key capabilities of the Castlemaine facility are:

- Engineering
- Machining
- Assembly
- Testing
- Packaging

Repair, Service and Technical Support for Australia & New Zealand

The Flowserve Australia & New Zealand Quick Response Centers (QRC) focus on providing customers with uncompromising service and support. The Australia & New Zealand QRC's are staffed by highly skilled engineers and technicians who are available around the clock, seven days a week to respond to customer queries, troubleshoot problems and provide reliable solutions.

Strength of Experience, Commitment to Excellence

The Australia & New Zealand QRC's serve customers from industries requiring superior equipment performance and service life, such as:

- Oil and gas production
- Hydrocarbon processing
- Chemical processing
- Water resources
- Power generation
- Mining and mineral processing
- Pulp and paper
- General industry
- Steel industry

Premier, Value-Added Service

With unequaled pump and seal knowledge, design expertise and manufacturing capabilities, the Australia & New Zealand QRC's specialize in value-added repair services. QRC engineers and technicians service most types of equipment, including pumps, motors, compressors, agitators, valves and seals. The dynamic range of services offered by the Australia & New Zealand QRC's include:

- Maintenance, repair and inspection service
- Pump upgrades, re-rates and retrofits
- Overhaul, outage and mechanical service
- Installation and commissioning service
- On-site repair and diagnostic services
- Contract maintenance
- Parts and components supply
- Field supervision
- Service maintenance contract
A Dynamic Range of Capabilities

Australia & New Zealand QRC facilities feature shop and office space to support repair, engineering, sales and customer service functions. In-shop operations can handle a full range of pumps from small, single-stage overhung units to large multistage, between bearing pumps.

The Australia & New Zealand QRC facilities offer extensive services, including:

- Machining capability:
  - Manual & CNC lathes
  - Manual & CNC milling machines
  - Horizontal & vertical boring mills
  - Radial, heavy duty press & industrial press drills
  - Shaft grinders
  - Welding
  - Painting
  - Sand blasting

- Lapping capabilities:
  - lapping tables

- Repair Capabilities:
  - Repair & static pressure test of slurry & API seals
  - Repair of seals

- Testing:
  - Mag particle testing
  - API and SLC seal static pressure testing
  - Dynamic slurry seal test
  - Dynamic seal tester

Maintenance and Repair Services
On-Site Services

Installation and Commissioning Service
With limited staffing, customers often do not have the resources to supervise ongoing, equipment-related activities. As a result, field service experts from the Australia & New Zealand QRC’s are available to support customer on-site requirements including:

• Equipment installation
• Start-up and commissioning
• Equipment foundation inspection
• Pipe and pump bolt-up, alignment and inspection
• Equipment removal and handling
• Equipment transportation
• Maintenance activities

Overhaul, Outage and Mechanical Services
The Australia & New Zealand QRC’s have extensive experience and resources to provide integrated outage and mechanical services. Field service teams offer rapid mechanical assistance, including maintenance, upgrade and inspection services during times of high demand.
Parts and Components

Quality parts complying to OEM specifications for the entire range of Flowserve product brands are readily available through the Australia & New Zealand QRC’s. As all parts conform to original design and materials specifications, customers are ensured reliable operation and lowest equipment ownership costs.

The Australia & New Zealand QRC’s can also re-engineer and produce non-Flowserve components for equipment that is obsolete or where the original equipment manufacturer cannot be located.

The Flowserve Advantage

Flowserve manufactured parts offer significant benefits to customers. As an OEM, Flowserve understands the critical elements involved in designing and producing high quality parts. Whether cast or machined, Flowserve manufactured parts and components result in lower total operating costs and increased personnel safety.

- Flowserve casting quality is superior. Surface finishes, tolerances and material compositions are maintained within defined specifications.
- Flowserve parts incorporate the latest design changes which improve operating efficiency and extend equipment life.
- Customers benefit from ongoing research to develop new materials, overlay techniques and mechanically improved components.
Unreliable and leaking pumps can be refurbished to “as-new” condition via a myriad of mechanical upgrade and retrofit options. Expert engineers from the Australia & New Zealand QRC facility have the experience to analyze and diagnose the root causes of mechanical pump failure and to recommend solutions that improve reliability, reduce emissions and increase plant uptime.

**Mechanical Upgrades and Retrofits**

- ISO 13709/API 610 10th Edition upgrades, including the RVX and RHWX upgrades for horizontal and vertical overhung pumps, bring out-of-date process pumps to current API standards. This avoids costly new equipment investments.
- Other available mechanical upgrades, include:
  - Increased rotor stiffness
    (Superstraight™ shaft material)
  - Bearing housing and bearings
  - Mechanical seal upgrade to API 682
  - Seal chamber
  - Coupling
  - Wear ring

---

**Hydraulic Upgrades and Retrofits**

Hydraulic re-rates can be provided to cover changes in flow or TDH, or increase efficiency for power savings.

- Optimization of lip and shroud clearances (A/B/C gap)
- Impeller modifications
- High-efficiency rotors
- Low flow modifications
- Re-bowling
- De-staging or upstaging
- Optimized hydraulics to reduce erosion/abrasion
**Pump and Seal Supplier to the World**

With an installed base of more than one million pumps and seals, Flowserve has sales offices, service centers and manufacturing facilities throughout the world. As a result of its extensive global footprint, Flowserve is ideally positioned to deliver best-in-class solutions to successfully address the world’s most challenging projects.
