Durco® Mark 3™ In-Line
ASME (ANSI) B73.2 Vertical In-Line Chemical Process Pumps
Flowserve is the driving force in the global industrial pump marketplace. No other pump company in the world has the depth or breadth of expertise in the successful application of pre-engineered, engineered, and special purpose pumps and systems.

**Pumping Solutions**
Flowserve is providing pumping solutions that permit customers to continuously improve productivity, profitability and pumping system reliability.

**Market-Focused Customer Support**
Product and industry specialists develop effective proposals and solutions directed toward market and customer preferences. They offer technical advice and assistance throughout each stage of the product life cycle, beginning with the inquiry.

**Dynamic Technologies**
Flowserve is without peer in the development and application of pump technology, including:
- Hydraulic engineering
- Mechanical design
- Materials science
- Intelligent pumping
- Manufacturing technology

**Broad Product Lines**
Flowserve offers a wide range of complementary pump types, from pre-engineered process pumps, to highly engineered and special purpose pumps and systems. Pumps are built to recognized global standards and customer specifications.

Pump designs include:
- Single-stage process
- Between bearing single-stage
- Between bearing multistage
- Vertical
- Submersible motor
- Positive displacement
- Nuclear
- Specialty
Without Equal

Designed to exceed ASME (ANSI) B73.2 criteria, the Durco Mark 3 In-Line is more than a space-saving chemical process pump. It offers improved pump reliability and extended mean time between planned maintenance (MTBPM) through these exclusive features:

- Standard Mark 3A power frame with micrometer impeller adjustment
- Optional ANSI 3A™ power frame with three-year MTBPM guarantee
- The unique reverse vane impeller with consistent, repeatable performance
- SealSentry™ seal chambers including models with flow modifiers
- The unique C-Plus precision motor and pump shaft alignment system
- Broad parts interchangeability with standard Mark 3 horizontal pumps
- Complete menu of mechanical seal options, including advanced gas seal technology, to best meet application needs
- A wide array of options and accessories for extended MTBPM and improved safety

Mark 3 In-Line

ASME (ANSI) B73.2 Vertical In-Line Chemical Process Pumps

Primary Industries Served

- Chemical processing
- Hydrocarbon processing
- General industry

Complementary Pump Designs

Depending upon application requirements, Flowserve can also provide these pump designs:

- HW ISO 13709/API 610 compliant in-line
- MSP low flow, high head in-line with variable frequency drive
- Mark 3 ASME (ANSI) horizontal standard
- CPX ISO horizontal standard
- PVML ISO 13709/API 610 compliant, in-line with multi-channel diffuser
The Durco Mark 3 In-Line ASME (ANSI) process pump delivers extended pump life, ease of maintenance and safety in addition to reliable, efficient performance. This space-saving pump has broad application in chemical and hydrocarbon processing as well as in general industry for services including:

- Chemical transfer
- Heat transfer
- Liquid gases
- Storage
- Water
- Washdown and cleaning
- Condensate return
- Light slurries

Operating Parameters

- Flows to 370 m³/h (1630 gpm)
- Heads to 230 m (755 ft)
- Pressures to 24 bar (350 psi)
- Temperatures to 370°C (700°F)
- Motor sizes to 110 kW (150 hp)

C-Flange Adapter is precision machined to provide fixed motor to pump angular shaft alignment within 0.001 mm/mm (0.001 in/in).

Adjustable Parallel Alignment of motor to pump shaft to within 0.05 mm (0.002 in) reduces coupling loads to improve pump, seal, motor and coupling life.

Broad Choice of Coupling Designs due to precisely adjustable parallel and fixed angular motor to pump shaft alignment. Conventional spacer coupling type is standard.

Open Motor Adapter permits ready access to seals and seal flush connections for reduced maintenance time.
Mark 3 Power Ends are completely interchangeable with Mark 3 standard pumps and offer:
- Double-row angular-contact outboard and single-row deep-groove inboard bearings for excellent axial and radial load support
- Double-lip oil seals
- Micrometer shaft adjustment for precisely accurate impeller-to-seal chamber setting and reduced maintenance time

Reduced Parts Inventory due to interchangeability with horizontal Mark 3
- Standard power ends
- Standard adapters
- Standard shafts
- Standard seals
- Standard hardware and fasteners

Superior Pipe Load Capacity as loads are transferred through the casing, eliminating misalignment of the pump and motor.

Streamlined Suction Nozzle eliminates turbulence for low NPSH requirements.

Flange Connections are available in ASME Class 150 or Class 300 with flat or raised faces.

Pump Bearings carry impeller loads — not the motor. With the largest shaft and bearing components available in standard ASME (ANSI) pumps, the Mark 3 offers greater load-handling ratings and deflection comparisons (< 0.05 mm [0.002 in] deflection at seal faces) for extended MTBPM. Regreasable bearing lubrication is standard.

Coupling Guards are available in steel, aluminum or polycarbonate materials to ASME B15.1 requirements.

Design Features

Reverse Vane Impeller
- Low, predictable seal chamber pressure and thrust loads for longer seal and bearings life
- Lowest overall NPSH required of any standard pump
- Rear cover plate wear surface instead of the more expensive casing
- In-shop or field impeller and mechanical seal setting
- Repeatable performance assurance

Micrometer Impeller Adjustment
- Impeller clearance setting to rear cover in 20 seconds
- No shims or wear rings
- In-shop or in-field adjustment

Advanced Mark 3 Seal Sentry Design Technology
- Extend seal life
  - Self-flushing
  - Self-venting
  - Self-draining
- Reduce maintenance and repair costs
- Permit use of less expensive seals and flush plans
  - Flush plans 11, 32, 52, 53, etc. can be eliminated
- Increase MTBPM
- Provide a safer environment for personnel
- Available in multiple designs to precisely match application needs
  - Tapered bore
    - FML (large gland bolt circles)
    - FMS (small gland bolt circles)
    - FMI (integral gland)
  - Cylindrical bore
    - CBL (large gland bolt circles)
    - CBS (small gland bolt circles)

Flow Modifiers Extend Mechanical Seal MTBPM
- Flow modifiers redirect flow from circumferential to axial
- Balanced flow with low pressure drop in the chamber helps keep solids in suspension, minimizing erosive characteristics of the process
- A mechanical seal creates a centrifuging action away from its parts and into the returning flow path of the process liquid
- Solids and slurry merge in the returning flow path and are flushed out of the seal chamber
The Heart of the Pump: Shaft and Bearing Design

Flowserve offers the largest shaft and bearing components available in standard ASME (ANSI) pumps. A comparison of the Mark 3 Group 2 power end with that of a major competitor demonstrates the benefits of heavy-duty design.

Standard Mark 3 Power End
- Lubrication options
  - Regreasable bearings
  - Oil mist
  - Permanently lubricated bearings
- Bearing isolators
  - Inpro Seal’s non-contact Vapor Block

Mark 3 shafts are 43–252% more stiff.

### Optional ANSI 3A Power End
- Lifetime warranty*
- Certified clean room assembly

### Pump Stand
- Large footprint for stability
- Permits fixed mounting of pump unit
- Reduced installation costs

### Additional Options
- Jacketed seal chamber
- DurcoShield™ splash and shaft guard
- ClearGuard™ non-metallic coupling guard

*Note: Adherence to proper installation, operation and maintenance procedures is necessary for Lifetime warranty. Contact your Flowserve representative for detailed terms and conditions.
Flowserve Engineered Services is focused on providing customers with uncompromising service and support, where and when needed. Dedicated to delivering the highest quality support, Engineered Services integrates its extensive pump and materials engineering knowledge with creative service solutions. Engineered Services fully understands the business challenges facing customers and is prepared to manage solutions to succeed as a team.

A worldwide network of service and repair centers staffed by highly skilled engineers and technicians is available around the clock, seven days a week to respond to customer queries, to evaluate and troubleshoot problems and to provide reliable solutions.

Flowserve partners with customers to respond to the dynamic business conditions that affect them. Flowserve will work with customers to drive efficiency, maximize throughput and control process quality. Whether user needs involve on-site technical assistance or broader project planning with full turnkey responsibility, Flowserve Engineered Services will deliver professional, reliable results.

Flowserve has long served industries requiring superior equipment performance and service life.
- Oil and gas production
- Hydrocarbon processing
- Chemical processing
- Water resources
- Power generation
- Nuclear
- Mining and mineral processing
- Pulp and paper
- General industry

Engineered Services is dedicated to maximizing equipment performance and providing reliability-centered maintenance programs for pumps and related equipment, regardless of manufacturer. Using the FlowStar™ asset management software, Engineered Services tracks performance and supports improvement programs using a service life cycle cost business approach. The results are improved reliability and increased profitability.
