Slurry
Heavy-Duty,
Dual Case
Lined Pump
Pump Supplier To The World

Flowserve is the driving force in the global industrial pump marketplace. No other pump company in the world has the depth or breadth of expertise in the successful application of pre-engineered, engineered, and special purpose pumps and systems.

Pumping Solutions
Flowserve is providing pumping solutions that permit customers to continuously improve productivity, profitability and pumping system reliability.

Market-Focused Customer Support
Product and industry specialists develop effective proposals and solutions directed toward market and customer preferences. They offer technical advice and assistance throughout each stage of the product life cycle, beginning with the inquiry.

Dynamic Technologies
Flowserve is without peer in the development and application of pump technology, including:
- Hydraulic engineering
- Mechanical design
- Materials science
- Intelligent pumping
- Manufacturing technology

Broad Product Lines
Flowserve offers a wide range of complementary pump types, from pre-engineered process pumps, to highly engineered and special purpose pumps and systems. Pumps are built to recognized global standards and customer specifications.

Pump designs include:
- Single-stage process
- Between bearing single-stage
- Between bearing multistage
- Vertical
- Submersible motor
- Positive displacement
- Nuclear
- Specialty
**TKL Titan Slurry**

**Heavy-Duty, Dual Case Lined Pump**

**Heavy-Duty Construction**
The Flowserve TKL Titan Slurry pump is a true mill-circuit slurry pump. It reflects the company’s innovation and engineering expertise in hydraulic design, materials science and manufacturing excellence. Moreover, the Flowserve TKL Titan Slurry pump is a proven design from a company with more than a century of experience in mining’s toughest applications.

**Materials Interchangeability of Wear Components**
The Titan Slurry’s dual casing design permits interchangeability of the wear components to enhance the pump’s versatility, whether the application demands elastomeric or hard metal materials of construction. Wear components can easily be converted from elastomeric to hard metal and vice versa. This flexibility translates into reduced inventory requirements and operating costs.

**Applications**
- Abrasive process slurries
- Tailings – high and low pressure
- Sand and gravel
- Bottom and fly ash
- Dredging
- Quarry duties
- Cement production
- Alumina production
- Mine dewatering
- Mill discharge and scale
- Cyclone feed
- Flotation transfer
- Thickener feed
- Lime circulation
- Sugar processing

**Complementary Pump Designs**
- Type R rubber lined slurry pump
- Type M hard metal slurry pump
- LC chemical slurry pump
- Types MJ and MJC vertical hard metal slurry pumps
- Types RJ and RJC vertical rubber lined slurry pumps
- Terra-Titan vertical sump pump
The Flowserve TKL Titan Slurry pump is a horizontal, single-stage, end suction configuration with a dual case and a tangential discharge. It is engineered to handle high concentrations of coarse, abrasive solids in suspension. The Titan Slurry’s unique dual case is designed to use either a hard metal or elastomeric liner for application flexibility.

The heavy-duty Titan Slurry can be bolted in place of similar dual casing design slurry pumps with little or no site modification. Its superior hydraulic design results in the industry’s highest efficiencies.

Operating Parameters
- Flows to 3600 m³/h (16 000 US gpm)
- Heads to 90 m (300 ft)
- Pressures to 35 bar (510 psi) with metal liner; 25 bar (360 psi) with rubber liner; 40 bar (580 psi) with high-pressure option
- Temperatures to 110°C (230°F)
- Sizes 50 (2 in) to 350 mm (14 in)

Removable Stuffing Box converts to various shaft sealing options without modification to the shaft, liner or impeller. Choice of materials available for corrosive applications.

Elastomeric and Hard Metal Liners are fully interchangeable, allowing the most economical material to be used.

High-Efficiency, Closed Vane Impeller has adjustable face clearance and generous wear allowance. Threaded shaft design eliminates the troublesome impeller nut.

Dual Casing provides access to elastomeric or hard metal liners for inspection or replacement. Machined mating faces provide proper liner compression. Both the radial joint and piping connections are complete through-bolt designs for ease of disassembly.
**Significant Benefits**

- Heavy-duty reliability
  - Extra thick wear allowances
  - Oversized shaft and bearings
  - Improved NPSHR for wider application
  - Less cavitation and impeller wear
  - Maximum wet-end life between rebuilds

- Reduced costs
  - Optimal hydraulic selection
  - Lower energy costs
  - Reduced pump and parts inventory requirements
  - Higher peak efficiency values
  - Reduced maintenance costs
  - Increased uptime

- Versatility
  - Multiple configurations
  - Choice of materials to suit application
  - Parts interchangeability

**Rugged Full Frame Support**

Provides secure mounting for reduced vibration while allowing for casing rotation. Cradle mount of cartridge permits easy removal without disturbing alignment and with minimal dismantling. Impeller axial adjustment is external of the cartridge.

**Easily Retrofitable**

The Titan Slurry conforms to industry standard slurry pump dimensions. All base mounting holes, flange sizes and positions are dimensionally compatible with the industry’s most widely used pumps. This enables the Titan Slurry to be installed in place of competitor pumps with little or no site modification.

**Multiple Materials**

The Titan Slurry offers liner components in numerous materials of construction to maximize wear resistance.

- Natural rubber and polyurethane are suitable for fine solids and mildly corrosive slurries.
- High chrome iron is preferred for applications containing coarse solids, as well as those at higher pressures and temperatures.
- Ceramic materials exhibit outstanding abrasion and corrosion resistance. They are recommended for hot, corrosive slurries.

**Innovative Lined Dual Case Design**

The Titan Slurry boasts state-of-the-art hydraulic design to withstand the demands of severe slurry applications. The dual case design employs an innovative, replaceable liner system to maximize wear resistance, efficiency and pump life while minimizing total cost of ownership.

Metallic volute liners are accurately aligned with dual adjustment fasteners through the outer casing. Elastomeric volute liners are secured to the casing halves with dovetail fits.

Front and back liners are positively located through the casing with studs.

**Captive Metal Liners**

Are safely handled during in situ rebuilds. The volute is removed while positively clamped into the casing by clamp bolts. Eyebolt meets all lifting safety regulations.
Available Options
- Mill duty impellers
- Sugar industry suitable open type impeller
- High-pressure casings for series pumping

Drive Options
- Direct coupled
  - Direct drive base mounted
- Belt driven
  - Side drive base mounted
  - Direct overhead motor mount
  - Reverse overhead motor mount

Shaft Sealing Methods

Optional Expeller Seal uses centrifugal force to expel fluid from the seal chamber. Recommended for applications in which abrasive particles cause frequent packing failures, clean water is limited, or product dilution is not tolerable.

Gland Packing is available for most applications. Extra deep stuffing box accepts high-quality gland packing, lantern ring and split gland. Recommended for mineral processing applications in which clean water is available and pump operates in a controlled environment.

Mechanical Sealing is available for no leak applications and to meet environmental requirements. Most quality mechanical seals such as the Flowserves SLC and SLM types can be fitted as required.

Service Dedication
Flowserve Engineered Services is focused on providing customers with uncompromising service and support, where and when needed. Dedicated to delivering the highest quality support, Engineered Services integrates its extensive pump and materials engineering knowledge with creative service solutions. Engineered Services fully understands the business challenges facing customers and is prepared to manage solutions to succeed as a team.

A worldwide network of service and repair centers staffed by highly skilled engineers and technicians is available around the clock, seven days a week to respond to customer queries, evaluate and troubleshoot problems and provide reliable solutions.

Strength of Experience, Commitment to Excellence
Flowserve has long served industries requiring superior equipment performance and service life.
- Oil and gas production
- Hydrocarbon processing
- Chemical processing
- Water resources
- Power generation
- Nuclear
- Mining and mineral processing
- Pulp and paper
- General industry

Engineered Services is dedicated to maximizing equipment performance and providing reliability-centered maintenance programs for pumps and related equipment, regardless of manufacturer. Using the FlowStar™ asset management software, Engineered Services tracks performance and supports improvement programs using a service life cycle cost business approach. The results are improved reliability and increased profitability.

Business Partner
Flowserve partners with customers to respond to the dynamic business conditions that affect them. Flowserve will work with customers to drive efficiency, maximize throughput and control process quality. Whether user needs involve on-site technical assistance or broader project planning with full turnkey responsibility, Flowserve Engineered Services will deliver professional, reliable results.
