Flowserve is the driving force in the global industrial pump marketplace. No other pump company in the world has the depth or breadth of expertise in the successful application of pre-engineered, engineered and special purpose pumps and systems.

**Life Cycle Cost Solutions**
Flowserve provides pumping solutions that permit customers to reduce total life cycle costs and improve productivity, profitability and pumping system reliability.

**Market Focused Customer Support**
Product and industry specialists develop effective proposals and solutions directed toward market and customer preferences. They offer technical advice and assistance throughout each stage of the product life cycle, beginning with the inquiry.

**Broad Product Lines**
Flowserve offers a wide range of complementary pump types, from pre-engineered process pumps, to highly engineered and special purpose pumps and systems. Pumps are built to recognized global standards and customer specifications.

Pump designs include:
- Single-stage process
- Between bearings single-stage
- Between bearings multistage
- Vertical
- Submersible motor
- Positive displacement
- Nuclear
- Specialty

---

**Product Brands of Distinction**

- ACEC™ Centrifugal Pumps
- Aldrich™ Pumps
- Byron Jackson® Pumps
- Calder™ Energy Recovery Devices
- Cameron™ Pumps
- Durco® Process Pumps
- Flowserve® Pumps
- IDP® Pumps
- INNOMAG® Sealless Pumps
- Lawrence Pumps®
- Niigata Worthington™ Pumps
- Pacific® Pumps
- Pleuger® Pumps
- Scienco™ Pumps
- Sier-Bath® Rotary Pumps
- TKL™ Pumps
- United Centrifugal® Pumps
- Western Land Roller™ Irrigation Pumps
- Wilson-Snyder® Pumps
- Worthington® Pumps
- Worthington Simpson™ Pumps
The HED family of two-stage, radially split pumps is particularly well suited for high-temperature process applications, such as those found in hydrocarbon processing, power and specialty services. This family of pumps fills the performance range between the single-stage HDX pump and multistage, double-case pumps.

Available with either a single- or double-suction, first-stage impeller, the pumps feature heavy-duty, single or dual volute casings with a staggered arrangement for extended pump reliability and life.

**Meeting Industry Needs**

The HED and HED-DS are fully compliant with ISO 13709/API 610 (BB2) standards. The pumps incorporate all of the design requirements specified by the demanding hydrocarbon processing and power industries. These include:

- ISO 13709/API 610 specified nozzle loads and shaft run-out requirements
- ISO 21049/API 682 mechanical seal chambers
- Centerline-mounted casing
- Bearing options
- Materials options
- Control and monitoring systems
- Low NPSH capabilities

**Broad Application**

- Petroleum refining, production and distribution
- Heavy-duty chemical and petrochemical processing
- Liquefied gas industry service
- Boiler feed
- Heavy-duty utility service

**Complementary Pump Designs**

Type HED and HED-DS pumps may be used with many other Flowserve pump designs, including:

- Radially split, overhung process pumps
- Single-stage, between bearings pumps
- Multistage, between bearings pumps
- Vertical, double-case pumps
Features and Benefits

Double Casing Covers facilitate maintenance. Gasketing is metal-to-metal fit, fully confined and controlled compression to ensure proper sealing and alignment when handling hot liquids.

ISO 21049/API 682 Seal Chamber accommodates a wide variety of seal configurations, including dual pressurized and unpressurized cartridge types for the most severe services. A full complement of ISO 13709/API 610 seal flush plans is available. Seal chambers are maintained at comparable pressures by a pressure equalizing line fitted on the discharge side chamber.

Raised Face Flanges meet ASME B16.5 criteria for Class 600. Surface finish is in accordance with ISO 13709/API 610. Class 300 and 900 flanges are available upon request.

Renewable Casing and Impeller Wear Rings are secured by locking pins or threaded dowels. Wear rings economically restore pump efficiency and maintain operational stability. Optional non-metallic wear rings are available in PEEK and other specialty materials.

Cartridge Seal Mounting ensures precise seal face setting for maximum seal life while easing maintenance.

Operating Parameters

- Flows to 2500 m³/h (11 000 gpm)
- Heads to 750 m (2460 ft)
- Pressures to 120 bar (1750 psi)
- Temperatures to 450°C (842°F)
- Speeds to 3600 rpm
- Specific gravities down to 0.35
Dual Volute Construction
The HED and HED-DS feature heavy-duty casings with either single or dual volute staggered arrangement construction. Both configurations ensure radial balance over the full operating range. Detrimental shaft deflection and vibration are virtually eliminated.

Dynamically Balanced Impellers
Precision cast impellers are dynamically balanced to reduce vibration and ensure hydraulic efficiency.
- Impellers are positively locked to the shaft to eliminate vibration
- Ceramic core casting technology produces incredibly smooth passages, improving pump efficiency
- Face-to-face impeller mounting of the HED results in axial thrust balance over the entire operating range of the pump
- The double-suction, first-stage impeller of the HED-DS minimizes axial thrust problems, reduces NPSHR and allows mechanical seals to operate at equal and low pressure

Oil-Lubricated Bearings
Bearings are lubricated by means of a slinger or ring oil system. This lubrication system prolongs bearing life by ensuring the oil penetrates the bearings without foaming.
- Standard single row, self-aligning radial bearing
- Standard dual single row, back-to-back thrust bearings
- Optional bearing arrangements and lubrication system are available to meet application requirements

Carbon Steel Bearing Housing
With standard labyrinth type oil seals, the carbon steel bearing housing is designed with 360° bolting to the mounting bracket.
- Available bearing isolators prevent oil loss and contamination.
- Optional fan-cooled bearing housing permits use in extreme temperatures without water cooling systems.

Stiff Shaft Design
Stiff shafts ensure trouble-free operation below the first critical speed. A short bearing span and a heavy shaft minimize deflection under all operating conditions.
Bearing Options

• **Sleeve Radial and Ball Thrust Bearings**
  – Applied to maximum energy density (power x rated speed) ratings of 4.0 million kW-rpm or 5.4 million hp-rpm.
  – For applications in which thrust bearing speed and life for rolling element bearings are within ISO 13709/API 610 limits.

• **Sleeve Radial and Tilting Pad Thrust Bearings**
  – Applied when energy density ratings and bearing speed or life is beyond the limits for rolling element bearings as defined by ISO 13709/API 610.
  – Tilting pad thrust bearings normally require an external forced lubrication system. Pump shaft driven or separate lube pumps available.

Shaft Options

• Hydraulic-fitted coupling
• Double extended

Available Baseplates

• Welded steel with drain rim or pan
• Sub-base under pump only
• Skid type non-grouted
• Three-point design
• Pregrouted design

Other Options

• Pure or oil mist bearing lubrication
• Water- or fan-cooled bearings
• Coatings for slurry services
• Coke crusher construction

**HED Range Chart**
Typically, 90% of the total life cycle cost (LCC) of a pumping system is accumulated after the equipment is purchased and installed. Flowserve has developed a comprehensive suite of solutions aimed at providing customers with unprecedented value and cost savings throughout the life span of the pumping system. These solutions account for every facet of life cycle cost, including:

**Capital Expenses**
- Initial purchase
- Installation

**Operating Expenses**
- Energy consumption
- Maintenance
- Production losses
- Environmental
- Inventory
- Operating
- Removal

**Innovative Life Cycle Cost Solutions**
- New Pump Selection
- Turnkey Engineering and Field Service
- Energy Management
- Pump Availability
- Proactive Maintenance
- Inventory Management

While exact values may differ, these percentages are consistent with those published by leading pump manufacturers and end users, as well as industry associations and government agencies worldwide.
