

Kämmer® Series 132000

Corrosive Application Valves

Experience In Motion

The new series 132000 control valve completes the range of lined valves within the FLOWSERVE corporation. Many years of experience in the manufacture of lined ball and plug valves and the sophisticated experience of manufacturing excellent reproducible trims for linear valves are combined in this new product.

High quality lining materials such as PFA (standard), PVDF, PP, ETFE and FEP as well as PFA antistatic, cover most mediums and applications. The revolutionary PTFE bellows design allows a standard pressure rating of PN16. The increased flow capacity means that the most economical valve can be chosen for the application.

Standard Features and Benefits

- Anti-blowout stem design
- T-groove liner connection
- PN16 modified PTFE bellows seal, as standard configuration
- Guided stem
- Metal to metal body/bonnet connection for defined compression of the gasket
- Liner thickness 3.5 mm for valve sizes up to DN 20 / ¾" and 5 mm for all sizes above
- Threaded plug and seat interchangeable with other plug and seat sizes
- DIN / ANSI bodies and connections

Optional:

- Hastelloy C-276 plug and seat inserts for small K_{vs} / C_{vs} -values
- Test connection NPT ¼"

Lining Materials

The liner material, the seat and the bellows seal are the only parts which are in contact with the medium. High quality lining materials such as PFA, (Perfluoroalkoxy resin) protect the metal parts of the valve assembly.

T-grooves provide an extremely robust connection between the liner and the valve metal body, especially important in vacuum applications. The liner thickness is 3.5 mm for valve sizes up to DN 20 / ¾" and 5 mm for all sizes above.

Liner materials are available in most common combinations. PFA, FEP, PP, PVDF ETFE or antistatic PFA cover most application requirements.

T-Groove Liner Connection

Trim Design

Threaded plug and seat design for easy replacement and maintenance. Excellent reproduceable trims and C_v -values based on long term experience even for small and very small C_v -values

Flowserve Corporation has established industry leadership in the design and manufacture of its products. When properly selected, this Flowserve product is designed to perform its intended function safely during its useful life. However, the purchaser or user of Flowserve products should be aware that Flowserve products might be used in numerous applications under a wide variety of industrial service conditions. Although Flowserve can provide general guidelines, it cannot provide specific data and warnings for all possible applications. The purchaser/user must therefore assume the ultimate responsibility for the proper sizing and selection, installation, operation, and maintenance of Flowserve products. The purchaser/user should read and understand the Installation Instructions included with the product, and train its employees and contractors in the safe use of Flowserve products in connection with the specific application.

While the information and specifications contained in this literature are believed to be accurate, they are supplied for informative purposes only and should not be considered certified or as a guarantee of satisfactory results by reliance thereon. Nothing contained herein is to be construed as a warranty or guarantee, express or implied, regarding any matter with respect to this product. Because Flowserve is continually improving and upgrading its product design, the specifications, dimensions and information contained herein are subject to change without notice. Should any question arise concerning these provisions, the purchaser/user should contact Flowserve Corporation at any one of its worldwide operations or offices.
