SPECIALIZED DISCLOSURE REPORT

Flowserve Corporation

(Exact Name of Registrant as Specified in Charter)

New York
(State or other jurisdiction of incorporation)

1-13179
(Commission File Number)

31-0267900
(IRS Employer Identification No.)

**5215 N. O'Connor Blvd.,
Suite 2300, Irving, Texas**
(Address of principal executive offices)

75039
(Zip Code)

(972) 443-6500
(Registrant's telephone number, including area code)

N/A

Check the appropriate box to indicate the rule pursuant to which this form is being filed, and provide the period to which the information in this form applies:

Rule 13p-1 under the Securities Exchange Act (17 CFR 240.13p-1) for the reporting period from January 1 to December 31, 2018.

Item 1.01. Conflict Minerals Disclosure and Report.

Conflict Minerals Disclosure

A copy of the Company's Conflict Minerals Report is provided as Exhibit 1.01 hereto and is publicly available at <http://www.flowserve.com/en/more/about-company/conflict-minerals-policy> as well as the SEC's EDGAR database at www.sec.gov.

Item 1.02. Exhibit

The Conflict Minerals Report required by Item 1.01 is filed as Exhibit 1.01 to this Form SD.

SECTION 2 – EXHIBITS

Item 2.01. Exhibits

Exhibit 1.01 – [Conflict Minerals Report as required by items 1.01 and 1.02 of this Form SD.](#)

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the undersigned hereunto duly authorized.

Dated: May 31, 2019

FLOWSERVE CORPORATION

By: /s/ R. Scott Rowe
R. Scott Rowe
President and Chief Executive Officer

Flowserve Corporation
Conflict Minerals Report
For the Year Ended December 31, 2018

This report for the year ended December 31, 2018 is presented to comply with Rule 13p-1 under the Securities Exchange Act of 1934 (the “Rule”). The Rule was adopted by the Securities and Exchange Commission (“SEC”) to implement reporting and disclosure requirements related to Conflict Minerals as directed by the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 (“Dodd-Frank Act”). The Rule imposes certain reporting obligations on SEC registrants whose manufactured products contain Conflict Minerals which are necessary to the functionality or production of their products.

Conflict Minerals are defined as cassiterite, columbite-tantalite, gold, wolframite, and their derivatives, which are limited to tin, tantalum and tungsten (“Conflict Minerals”) (3TG). These requirements apply to all registrants that have Conflict Minerals that are essential to the functionality or production of their products whatever the geographic origin of the Conflict Minerals and whether or not they fund armed conflict.

1. Company Overview

This report has been prepared by management of Flowserve Corporation (herein referred to as “the Company,” “we,” “us,” or “our”). The information includes the activities of all majority-owned subsidiaries and variable interest entities that are required to be consolidated under U.S. generally accepted accounting principles.

Flowserve is a world-leading manufacturer and aftermarket service provider of comprehensive flow control systems. We develop and manufacture precision-engineered flow control equipment integral to the movement, control and protection of the flow of materials in our customers’ critical processes. Our product portfolio of pumps, valves, seals, automation and aftermarket services supports global infrastructure industries, including oil and gas, chemical, power generation and water management, as well as general industries markets where our products and services add value. Our principal products are sold through two business segments:

- FPD for custom, highly-engineered and pre-configured industrial pumps and pump systems, mechanical seals, auxiliary systems and replacement parts and related services; and
- FCD for engineered and industrial valves, control valves, actuators and controls and related services.

Supply Chain

We manufacture a wide range of products that contain Conflict Minerals, but we do not purchase ore or unrefined Conflict Minerals from mines and generally are many steps removed in the supply chain from the mining of these minerals. As a result, we rely on suppliers for various components and parts that contain Conflict Minerals that are utilized in the assembly of our products. Due to the size of our Company, the complexity of our products, and our location in the supply chain being many steps downstream from miners and smelters, we must rely on our direct suppliers to provide information on the origin of the Conflict Minerals contained in the components and parts supplied to us – including sources of Conflict Minerals that are supplied to them from their suppliers. Further, many of our suppliers are not SEC registrants subject to the reporting requirements of the Rule and as a result, have immature Conflict Minerals programs. As a result of this complexity, we conducted a survey of the suppliers that focused not only on those who represented the majority of our expenditures in 2018, but also focused on suppliers where the nature of the component, or the location of the supplier, indicated that those components had a higher probability to contain Conflict Minerals.

2. Reasonable Country of Origin Inquiry:

Flowserve undertook the following measures to perform a country of origin inquiry on its Conflict Minerals:

- Utilized a risk based approach, based on an examination of internal records such as bills of sale or product specifications to identify business segments which contracted to manufacture products reasonably believed to contain one or more Conflict Minerals and identified the relevant suppliers of the Conflict Minerals for these products;
- Sent surveys (using the Conflict-Free Sourcing Initiative (CFSI) Conflict Minerals Reporting Template developed as a result of the Electronic Industry Citizenship Coalition(EICC)/Global e-Sustainability Initiative (GeSI)) to approximately 600 suppliers, requesting confirmation of the presence of Conflict Minerals in the materials or components they supplied to Flowserve, and information regarding the origin of those minerals;
- Identified and placed additional emphasis on suppliers that are most significant to Flowserve’s Conflict Minerals program using criteria developed by the business, such as the amount of sourcing spend with the supplier and the likelihood of Conflict Minerals being supplied from the supplier;
- Reviewed the responses received for indicators (e.g., untimely or incomplete responses as well as inconsistencies within the data reported in the template) that Conflict Minerals may be sourced from the Democratic Republic of Congo (DRC) and adjoining countries (the “Covered Countries”) and attempted to further engage these suppliers to perform additional due diligence, as needed; and
- Continued to follow up with suppliers and continued to regularly communicate Flowserve’s expectations on responsible supply chains of Conflict Minerals by transmitting surveys and other communications and continually requesting compliance with requests for information and documentation from unresponsive suppliers.

The above efforts led to a response rate of 70%. As mentioned above, an additional metric of spend coverage is being utilized. The suppliers that responded captured over 30% of the relevant spend. As a result of the reasonable country of origin inquiry, we are unable to determine the origin of the Conflict Minerals in our products and therefore cannot exclude the possibility that some may have originated in the Covered Countries. For that reason, we performed additional due diligence and are required under the Rule to submit to the SEC this Conflict Minerals Report (CMR).

Conflict Minerals Policy:

Flowserve culture is centered on ethics, integrity and trust. Our values drive how we treat each other, our customers, suppliers, partners and even our competitors. By combining uncompromising character, transparent business behavior, mutual respect, and world-class products and services, we seek to build an enduring culture that creates satisfied customers, engaged employees and sustainable, profitable growth. As a result, our ethical business culture supports global efforts to assist in the eradication of Human Rights abuses in the Democratic Republic of Congo (DRC) and adjoining countries, where the mining of certain minerals has partially financed the long-standing conflict in this region.

Flowserve supports the objectives and intent of this Conflict Minerals legislation. Additionally, we are committed to working toward a conflict free supply chain by implementing a management program integrated with our policies and processes to align our worldwide suppliers with this policy. Our Conflict Minerals program is addressed in our Supplier Code of Business Conduct, our Terms and Conditions with suppliers, and our Purchase Order requirements.

For additional information about our commitment to responsible sourcing and for our full Conflict Minerals policy, please visit our website at: <http://www.flowserve.com/en/more/about-company/conflict-minerals-policy>

3. Due Diligence Process

3.1. Design of Due Diligence Framework

Our due diligence measures have been designed to conform, with the framework in *The Organization for Economic Co-operation and Development (OECD) Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas* (Second edition, 2013) (OECD Guidance) and the related *Supplement on Tin, Tantalum, and Tungsten* and the *Supplement on Gold*.

3.2. Due Diligence Performed

3.2.1. Establish Strong Company Management Systems

As described above, Flowserve has adopted a company policy which is posted on our website. Additionally, as part of our management system for Conflict Minerals, Flowserve has established a cross functional internal task force, realigned active management resources, and created a position that is responsible for managing the Conflict Minerals Program and requirements at Flowserve. A senior Flowserve executive, supported by a senior Flowserve lawyer, has oversight responsibility for Flowserve's Conflict Minerals task force. This management team is responsible for implementing the Conflict Minerals management systems and communicating them throughout the organization and our business segments. The team is comprised of subject matter experts from relevant functional areas such as supply chain, engineering, communications, legal and business integrity and compliance. Senior management and the Board of Directors are briefed about our management systems and due diligence efforts on an annual basis.

3.2.2. Identify and Assess Risks in Supply Chain

Because of our size, the complexity of our products, and the depth, breadth, and constant evolution of our supply chain, it is difficult to identify actors upstream from our direct suppliers. Accordingly, we participate in a number of industry-wide initiatives to leverage information and common process. Further, as discussed above, we conducted an analysis of our supply base, and identified and performed additional diligence on suppliers that supply products that may contain Conflict Minerals and continued to contact unresponsive suppliers. We also monitor and track suppliers that may not meet the requirements set forth in our Conflict Minerals Policy to determine their progress in meeting those requirements.

3.2.3. Design and Implement a Strategy to Respond to Risks

With respect to those products we manufacture or cause to be manufactured, Flowserve seeks to implement the following steps to mitigate the risk that necessary Conflict Minerals benefit armed groups:

- Seek, where practicable, alternative suppliers that responsibly source necessary Conflict Minerals, which may include sources within the DRC or adjoining countries that do not benefit armed groups;
- Engage with our suppliers to encourage their sourcing from conflict-free sources and identify and action suppliers that do not;
- Attempt to negotiate clauses in future supplier contracts requiring suppliers to adhere to rules and regulations relating to the use of Conflict Minerals; and
- Provide progress reports annually to our senior management and Board of Directors summarizing information gathered during our annual supply chain survey and providing a status of our risk mitigation efforts.

3.2.4. Carry out Independent Third Party Audit of Supply Chain Due Diligence

Flowserve does not have a direct relationship with smelters and refiners, nor do we perform direct audits of these entities that potentially provide our supply chain with Conflict Minerals. However, we do rely upon industry efforts to influence smelters and refineries to get audited and certified through CFSI's program.

3.2.5. Report on Supply Chain Due Diligence

In addition to this report, see our website at <http://www.flowserve.com/en/more/about-company/conflict-minerals-policy> for our full Conflict Minerals policy.

4. Due Diligence Results

Survey Responses

Responses included the names of 385 entities listed by our suppliers as smelters or refiners, based on our due diligence to-date and information available from public sources, the Company believes that only 318 of the entities identified by our suppliers are engaged in smelting and/or refining activities. See Appendix A. Approximately 87% (or 257) of the 318 entities were identified as certified Conflict-Free using the CFSI Reporting Template Revisions 5.11. We compared the names of smelters or refiners to the CFSI list of smelters and where a supplier indicated that the facility was certified as Conflict-Free, we ensured that the name was listed by CFSI. The final comparison was done utilizing the certified smelter listings from May 8, 2019.

The large majority of our suppliers who responded provided data at the company or divisional level, as described above, and, as such, we were unable to specify the smelters or refiners used for components supplied to Flowserve. We are therefore unable to determine whether any of the Conflict Minerals reported by the suppliers were contained in components or parts supplied to us or to validate that any of these smelters or refiners are actually in our supply chain.

Efforts to determine mine or location of origin

Through our participation in CFPSI, the OECD implementation programs, and requesting our suppliers to complete the template, we have determined that seeking information from our suppliers and their diligence with their sub-suppliers about Conflict Minerals smelters and refiners in our supply chain represents the most reasonable effort to determine the mines or locations of origin of the Conflict Minerals in our supply chain.

Smelters or Refiners

To date, Flowserve has received very limited information regarding smelters and/or refiners involved in the Company's supply chain, as well as the origin of any materials they may potentially produce for Flowserve's suppliers. The majority of our suppliers were unable to represent and/or confirm to us that Conflict Minerals from entities that are smelters and refiners had actually been included in components such suppliers supplied to Flowserve. Again, this reality is principally due to the fact that our suppliers, provided data at a company or divisional level, and, not specific to the products such suppliers produce for Flowserve.

Appendix A, as attached, contains a list of smelters and refiners that Flowserve suppliers identified as being present in their supply chains that we believe may have processed 3TG contained in materials supplied to the Company. While our suppliers have provided names of additional entities to those listed in Appendix A, our review process remains ongoing related to the determination of whether they are smelters or refiners for Conflict Minerals relevant to our products.

We are uncertain of the Conflict Mineral status of the products that we manufacture that are subject to the reporting obligations of Rule 13p-1, because we have been unable to determine the origin of the Conflict Minerals they contain or to determine whether they come from recycled or scrap sources; the facilities used to process them; their country of origin; or their mine or location of origin. This said, however, Flowserve will continue due diligence efforts going forward.

5. Due Diligence Improvement Steps

We intend to take the following steps to improve the due diligence conducted to further mitigate any risk that the necessary Conflict Minerals in our products could benefit armed groups in the DRC or adjoining countries:

- a. Continue requesting and implementing a Conflict Minerals flow-down clause in new or renewed supplier long term agreements.
- b. Continue to engage with suppliers and direct them to training resources to increase the response rate and improve the content of the supplier survey responses.
- c. Intensify the identification of and communication with Flowserve's second-tier smelters and refiners – i.e., smelters and refiners that sell Conflict Minerals directly to Flowserve's first-tier suppliers and push to increase the number of smelters and refiners that participate in CFSP.
- d. Spread best practices learned during execution of due diligence process in previous years across Flowserve business units.
- e. Continue to engage suppliers found to be supplying us with Conflict Minerals from sources that support conflict in the DRC or any adjoining country and seek to establish an alternative source of Conflict Minerals that does not support such conflict.
- f. Continue to work with the OECD and relevant trade associations to define and improve best practices and build leverage over the supply chain in accordance with the OECD Guidance.
- g. Evaluate the current processes and procedure with the intent to further enhance the robustness of Flowserve's Conflict Mineral program.
