# FLOWSERVE MONITORING CENTER

**Partner with technical specialists to monitor equipment performance and promptly detect issues**

The Flowserve Monitoring Center is a dedicated facility where proprietary algorithms and technical specialists monitor your equipment to identify performance issues and signs of potential failures before they impact your operation.

The moment critical and non-critical assets deviate from standard performance threshold limits, plant reliability engineers, operators and maintenance personnel will be notified of a potential problem via the Insight Portal. At the same time, our knowledgeable team at the Flowserve Monitoring Center will receive the alert and work with your operators to diagnose the issue and make recommendations.

## Flowserve Monitoring Center

### Flowserve Monitoring Center benefits

#### Improve asset reliability and availability

With equipment performance under observation, we can alert facility operators of equipment anomalies in near real time, significantly reducing — or even eliminating — downtime.

#### Respond to equipment issues quickly

The Flowserve Insight Portal is available online, 24/7 to monitor your asset performance and is completely accessible from a portal mobile device. Remote technical support, reliability consultations and quick-response teams are available to address your equipment and/or technology issues.

#### Prevent adverse equipment conditions before they happen

Dashboards and reports track asset performance over time. By reviewing the equipment's performance history, we can alert operators to those assets which will likely experience a fault condition.

#### Understand how equipment should perform

With centuries of experience with rotating equipment, Flowserve is in a unique position to analyze data and diagnose problems. We also can provide recommendations on how to avoid extreme performance conditions.

### An extension of your team

We designed the Flowserve Monitoring Center to give you “another set of eyes” to monitor and analyze your equipment more closely. Not only can we help you uncover the root causes of equipment problems more quickly, we also can provide repair recommendations and deploy the resources required to address equipment issues.

### How Flowserve is different

Flowserve offers a unique remote monitoring solution that includes a physical state-of-the-art monitoring facility. Our knowledgeable technicians, analysts, project managers and engineers know rotating equipment and data analytics inside and out.
