

Valtek® Multi-Z Severe Service Valves

Eliminate cavitation in high pressure drop applications

Operators in the power generation, oil and gas, and chemical industries are frequently confronted with extreme pressure differentials in their processes. To combat this, they need valves with continuous, steady-state flow curves with appropriate flow characteristics and long and uniform service life as well as low maintenance costs.

The Valtek® Multi-Z axial flow control valve eliminates cavitation often associated with high pressure drops. It is ideal for processes with entrained solids and in services where high rangeability is required.

Available in globe and angle configurations as well as a variety of standard materials, the Multi-Z valve:

- Effectively minimizes noise levels
- Passes solids up to 30.4 mm (1.2 in) without plugging
- Utilizes long strokes for finer control resolution

In addition to standard trims, a wide range of engineered trims are available with customized capacity and cavitation resistance for unusual or difficult applications.

Avoid costly safety recertification

Operators can avoid an expensive and time-consuming re-evaluation of safety relief systems in a maintenance of certification (MOC) review by choosing the Valtek Multi-Z valve with standard trim to replace existing equipment.

That's because verified valve flow capacities (Cv) of the Multi-Z valve exactly match commonly accepted industry standard capacities.

Solids and cavitation completely under control

Flowserve designed the Valtek Multi-Z valve to accommodate solids in liquid media, minimize high sound levels, tolerate high temperatures, eliminate cavitation formation and with a variety of materials to resist corrosion. The Multi-Z valve reduces cavitation by employing the following pressure drop mechanisms:

- Directional changes
- Frictional losses in small passages
- Mutual impingement of opposing streams
- Sudden expansion and contraction
- Turbulent mixing

Specifications*

Size	ANSI 1 to 8 in (globe and angle cast)
Pressure class	Size 1 to 6 NPS: Class 300 to 2500 Size 8 NPS: Class 300 to 1500
Body materials	Carbon steel (WCC or A105) Low-temperature carbon steel (LCC) Stainless steel (CF8M or 316SS) Chrome Moly (WC9) Duplex 22%
Body type	Globe and angle
End connections	Flanged RTJ Buttweld Socket weld
Trim type	Balanced or unbalanced Three to six stages of pressure reduction, as required by the service conditions
Shutoff	ANSI Class IV and V
Flow characteristic	Linear or modified equal percentage
Stem sealing	PTFE Graphite SAS 225 SureSeal HP LL SureSeal HP 325 SureGuard XT PTFE/Graphite V-ring
Actuator	Piston type VL / VL-C / VL-ES Spring diaphragm type KP (stainless steel) Spring diaphragm type FlowAct (carbon steel) Electric Hydraulic Manual
Certifications	PED (EU), TR CU (Russia), CRN (Canada) Fugitive emissions ISO 15848-1 SIL 3 capable

*These options are suitable for the majority of applications. For custom applications, a wide variety of trims, materials and options are available.

Features

- Tolerance to solids in the medium
- Eliminates cavitation
- Reduces noise
- Balanced and unbalanced designs
- The angle valve configuration is achieved with only a change in the valve body.

Principle of cavitation elimination

Cavitation, the rapid formation and collapse of vapor bubbles in a liquid, occurs when the pressure of the medium temporarily drops below the vapor pressure and then rapidly recovers. Cavitation creates erosion of valve body walls and other components, ultimately leading to the degradation of performance and valve life.

The Multi-Z valve trim prevents cavitation by controlling the pressure drop as the system medium is directed through multiple trim stages (i.e., three to six, depending on the application). The Multi-Z valve trim designs are optimized to ensure the medium pressure does not drop below the vapor pressure of the process fluid. The computational fluid dynamics (CFD) plot below illustrates the pressure drop across the Multi-Z valve trim. The trim design adheres to ISO/ASME RP-75.23.

The trim is available with linear or modified equal percentage characteristics. Custom plug contours are available for unusual applications. The Multi-Z valve utilizes long stroke lengths through the complete product range, providing better control resolution.

Figure 1: CFD analysis illustrates pressure drop across number of trim stages.

Figure 2: Flow curve

When the Multi-Z valve first opens, the staging is held closed. This allows the seating surfaces to open wide, preventing seat damage (see Figure 2).

Industry applications¹

Refinery	Charge pump recirculation
	Amine letdown
	Cold high-pressure letdown
Oilfield	Produced water injection
	High-pressure injection control
Power	Boiler feed water recirculation
	Boiler feed water startup
All Plants	High pressure drop applications
	Water letdown

¹ Multi-Z valves are not suitable for oxygen applications.

Flowserve Corporation has established industry leadership in the design and manufacture of its products. When properly selected, this Flowserve product is designed to perform its intended function safely during its useful life. However, the purchaser or user of Flowserve products should be aware that Flowserve products might be used in numerous applications under a wide variety of industrial service conditions. Although Flowserve can provide general guidelines, it cannot provide specific data and warnings for all possible applications. The purchaser/user must therefore assume the ultimate responsibility for the proper sizing and selection, installation, operation, and maintenance of Flowserve products. The purchaser/user should read and understand the Installation Instructions included with the product, and train its employees and contractors in the safe use of Flowserve products in connection with the specific application.

While the information and specifications contained in this literature are believed to be accurate, they are supplied for informative purposes only and should not be considered certified or as a guarantee of satisfactory results by reliance thereon. Nothing contained herein is to be construed as a warranty or guarantee, express or implied, regarding any matter with respect to this product. Because Flowserve is continually improving and upgrading its product design, the specifications, dimensions and information contained herein are subject to change without notice. Should any question arise concerning these provisions, the purchaser/user should contact Flowserve Corporation at any one of its worldwide operations or offices.
